

INSTALLING PET FEEDSTER PARTS: THE TIMER

1. Remove 8 screws from back of main body and take off back wall.
2. Pull out white timer cable.
3. Remove 4 screws and take out old timer.
4. Connect new timer to white timer cable.
5. Connect power. You can connect AC power by plugging power adapter directly into bottom of main body (one post has an electric plug).
6. Test timer buttons to make sure timer has been properly installed. Unplug AC power adapter from bottom of main body.
7. Attach new timer with 4 screws, reattach back wall to unit, and reattach main body to base. When reattaching main body to base, make sure they are well-connected as the electric post distributes power to unit.
